
System Integration Technologies

**Reduce Costs on BSS/OSS
and SOA Implementation
Projects Using SIT's
Outsourcing Option**

Company Profile Overview

System Integration Technologies was founded by a group of experts committed to deliver quality solutions for their customers.

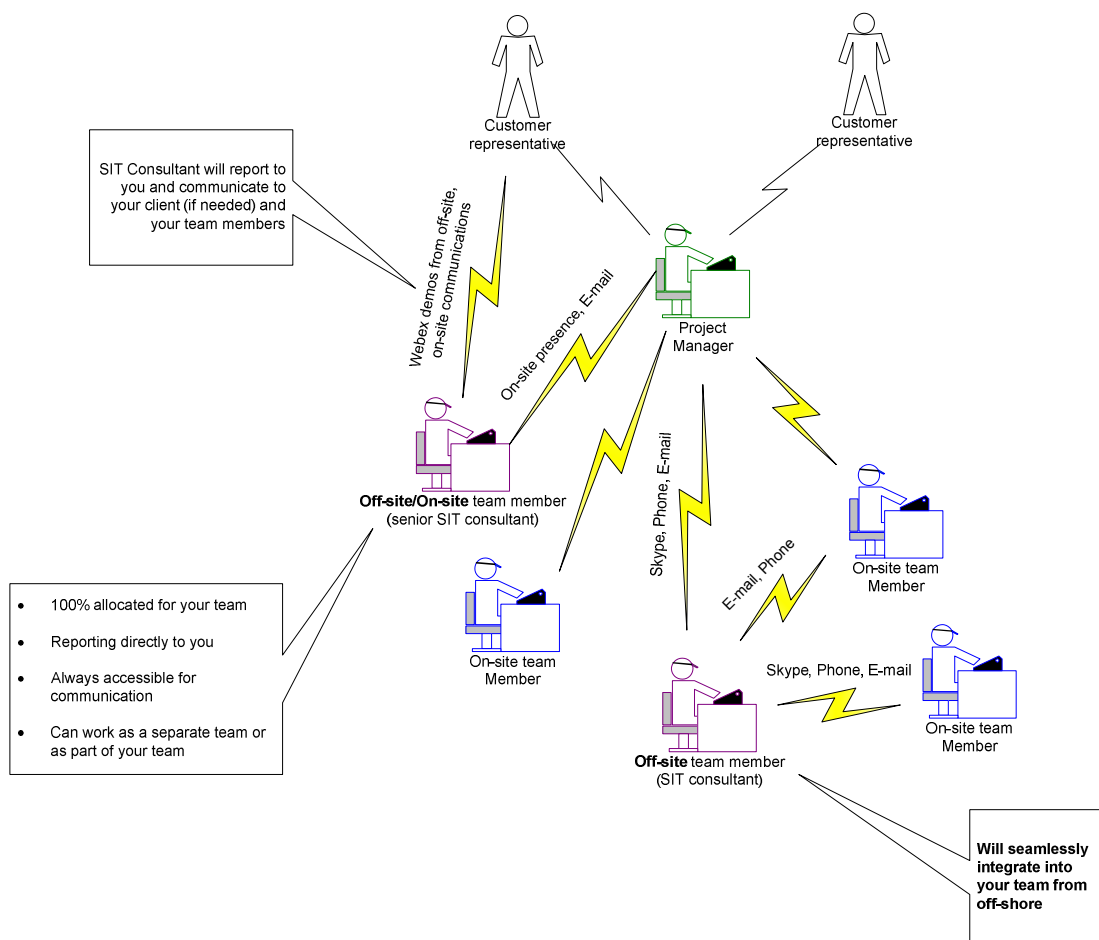

The company's focus is on delivering sound innovative OSS/BSS and Data Management solutions, something a telecom operator needs in order to survive in the competitive marketplace of 2008 and beyond.

Based in Russia and the USA, the company helps its clients to reduce costs on implementation projects by providing off-shore expertise.

For more information about SIT, please see <http://www.systemintegrationtechnologies.com/docs/SIT-OSS.pdf>

How it works

So how does the outsourcing work?

- SIT consultants will operate as part of your team in close collaboration
- Absolute transparency, reliability and expertise are own distinct features.

Why lower cost?

Why is the reduced cost?

Our outsourcing model is based on the principle of providing expertise from off-shore (office based in Russia), for lower rates, in comparison to average western consultants.

So the save is:

- on **cutting the number of your on-site consultants**, who are the expensive workforce, and replacing them with our off-site experts, 100% allocated for your project
- **cut** your current **travel expenses** on on-line communication via Webex, video and voice calls, shorten on-site presence if needed
- we **save man-days on using our experience and skills**, since we know how to deliver fast
- we **take away your people-resource and skills problems** and other HR issues by selecting relevant people for your job out of our workforce

Skills and Experience

These are the project roles, that our experts are best at:

- Business Analysts with wide experience in telecom
- Telecom experts with engineering background
- System integration engineers and architects
- Data migration experts
- Enterprise SOA solutions architects
- OSS/BSS architects

Our experience with Telco covers:

- Such OSS/BSS systems as Cramer, Metasolv, NetCracker
- Service Assurance
- Service Order Fulfillment (Service Provisioning & Activation)
- Analysis of Customer Impact
- Service Inventory Management
- Product Management
- Order Capturing (Sales-force Systems)
- Management of capacity of Network Equipment, Power Equipment, IP and Phone Numbers
- Network Expansion Planning
- Billing

How SIT outsourcing really works

How do exactly the team members work for you?

- Each and every one is an expert in what they do with at least three implementation projects background and at least 5 years of experience in the field
- Each one is accessible by phone, mail and over the internet during business hours
- Each expert is allocated solely for your project
- Everyone speaks fluent English
- Each activity of every team member is accurately tracked and reported to you every week

How exactly do the team members interact?

Apart of standard means of internet communication: phone calls, Skype messages, video chats and emails we widely practice:

- Webex sessions that proved to be very efficient for discussions on documents, demos, prototypes, etc
- Skype calls (including video)
- On-site travels when needed
- Any other of your company's standard communication way and tool

Summary & Contacts

In SIT, we are considering our distinct feature is the ability to provide not just a “work-force”, but the reliable, capable and knowledgeable team-members of your team
